Engage Children in Science and Engineering
Service Learning Course

Biology 375, Section 1
2 credits per semester
Students are required to take the course both semesters to provide continuity to community partners
Class meets Wednesdays 5:30 - 7 pm.
Required service component: 25 hours, including at least 10 hours working directly with children in an after-school science club

In this course, UW students learn age-appropriate, inquiry based, hands-on science and engineering activities, teaching and behavior management techniques and cultural competence to prepare them to lead a group of elementary or middle school children. UW students are matched with after-school providers to co-lead clubs and help enrich programming at these sites. No prerequisites, no science background required. Our philosophy is "Everyone is a Scientist or Engineer".
